Office Action Summary

**DETAILED ACTION**

1. Claims 1-43 have been examined.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-43 are rejected under 35 USC 103(a) as unpatentable over Huang(5,953,707) in view of Muraoka(US Pat. 6,317,725).
4. As per claims 1-43 Huang teaches a method of monitoring a supply chain activity(Abstract) of a plurality of sites(Fig 2)(Fig 1)(Fig 8)(Fig 46) on a network(Fig 46/406) and extracting supply related data to be monitored(Fig 5) and collecting this data(col 9 lines 64-col 11 line 15) and uploading this data to a user at a user interface(Fig 3/40).Furthermore, Huang teaches a DSS architecture(Decision Support System) to analyze supply chain efficiencies(col 4 line 45-col 6 line 57).Huang also teaches demand and forecast data(Fig 12/146/148) for the process as well as forecasting and planning (Fig 15) as well as a relational database(Fig 17)(Fig 19/216) and data sets comprising inventory data(Fig 19/182)(Fig 17/182) and legacy databases(Fig 16/136)(Fig 14/136)(Fig 13/136).Huang teaches delivery scheduling(Fig 20/212)

and replenishment planning(Fig 23/270) as well as all vendor management of replenishment and participation(Fig 24) as well as a distribution network(Fig 27) and heirarchichal sorting(Fig 37) as well as node structures for components, production, inventory, demand(Fig 38) and graphical user display(Fig 43)(Fig 45) of selected domains for status checking(Fig 39) as well as table updating and data display in a tree view(Fig 39) and encrytion online with an SQL server(Fig 47) as well as user authorization procedures(Fig 48) and scenario studies(Fig 54) and estimated behavior to anticipate any shortages or surpluses(Figs 64-67) as well as capacity checking(Fig 61) that is displayed to a user and which would constitute an alert condition(Fig 55).Maraoka teaches periodic prodiction loads over time(Fig 12/S4/S3) and load calculations(Fig 10) and determination if a target goal is achieved(Fig 12/S9)(Fig 7) or else is in an allowable range to determine surpluses and shortfalls(Fig. 13/S11) and accompanying corrections(Fig 13/S12).It would have been obvious to one skilled in the art at the time of the invention to combine Huang in view of Maraoka to teach the above. The motivation to combine is to teach a novel efficient production managment system capably of discerning between currently urgently needed target products and non urgently need products for the future ands to take the necessary corrective actions as enunciated by Maraoka(col 3 lines 17-36).

### *Conclusion*

#### **5. THIS ACTION IS MADE NON-FINAL.**
